Dry suit leaking? Seals causing a rash? Bio-seal to the rescue! Easy to use with your existing silicone, neoprene or latex dry suit seals. Don suit as usual, install bio-seal and you are ready to go. Experience a drier more comfortable fit under any condition.

**Installation** Install Bio-Seals on wrist or neck after donning suit. Take care not to poke holes in seal with fingers or jewelry. Bio-seal should rest flat against skin. Your dry suit seal should be worn as usual, resting primarily on the bio-seal instead of skin. **Cleaning** Wash with fresh water after each day of use. Use of cleaner, lubricant, or anything other than fresh water may diminish performance. Pat or air dry completely before storing in air tight container. **Caution** Oil from skin and other products, including bio-seals may cause slight amount of early wear in latex seals. Rinse your bio-seal prior to first use. Rinse your dry suit seals and bio-seals with fresh water after each day of use to reduce potential for early wear. Visit [www.diveapollo.com/bioseal](http://www.diveapollo.com/bioseal) for tips and additional information.

**LATEX FREE**
